Semih Yagli (**U.S. Lawful Permanent Resident**)

Email: semihyagli@gmail.com | Phone: +1 (609) 608-6323

GitHub: github.com/semihyagli ResearchGate: researchgate.net/profile/Semih-Yagli

Data Scientist with expertise in data analysis, machine learning, quantitative research and development, and full-stack application development, passionate about delivering creative, data-driven solutions to complex problems and generating actionable insights.

Educational Background

Princeton University, Princeton, New Jersey Sep. 2016 – May 2021
Electrical and Computer Engineering
Ph.D. in Electrical and Computer Engineering Dissertation Advisor: Prof. H. Vincent Poor
M.A. in Electrical Engineering GPA: 3.98/4.00

Orta Doğu Technical University, Ankara, Turkey (Double-Major) Sep. 2009 – May 2014
Mathematics, **Bachelor of Science**, GPA: 3.96/4.00
Electrical and Electronics Engineering, **Bachelor of Science**, GPA: 3.96/4.00

Patents

Machine Learning-Based Item Reranking Based on User Query and Cart Context	Patent No.: US20250342516A1	2025
Method and System for Fulfillment-Aware Product Search Ranking	(under review)	2026
Automatic Configuration Management in Cellular Networks	(under review)	2022

Coding and Technical

Programming Languages:	Python (XGBoost, Keras, PyTorch), Java, JavaScript, TypeScript, React, React Native, bash.
Data & Analytics:	SQL, NoSQL, BigQuery, R, Python (Pandas, PySpark, Matplotlib), Tableau.
Machine Learning & AI:	Neural Networks, Large Language Models, Natural Language Processing (NLP), Classification, Bayesian Inference, Thompson Sampling, Probabilistic Modeling, Clustering, Regression Analysis.
Development & Platforms:	Google Cloud (GCP), BigQuery, Firestore, Azure, Amazon Web Services, Axios HTTP.
Quantitative Skills:	Probability Theory, Optimization, Data Visualization.

Work Experience

Walmart Global Tech, Staff Data Scientist Oct. 2021 – Present

Lead end-to-end machine learning (ML) model development for e-commerce Search and BuyBox ranking systems, integrating engineering and data science capabilities across Python and Java. Conduct advanced experimentation, signal design, model training, and runtime deployment to drive large-scale business outcomes. Inform strategy through rigorous A/B testing, support infrastructure improvements, and mentor junior data scientists on navigating Walmart's complex systems.

Senior Data Analytics & Machine Learning Engineer at Search Ranking:

- **Delivered a 2.4% GMV lift** by architecting a unified ranking system that harmonized default and personalized search rankers, replacing fragmented legacy models with a high-performance, scalable framework.
- **Improved query-item relevance by 11%** by engineering a novel token-importance signal; spearheaded the end-to-end integration via **Java-based CI/CD** pipelines and advanced ML model deployments.
- **Directed cross-functional model validation** using interleaving and A/B testing frameworks, ensuring statistical rigor and driving consensus among senior stakeholders for high-stakes production changes.
- **Optimized system reliability and latency** by deploying high-throughput ranking features within core infrastructure.

Staff Data Scientist at Buy Box Offer Ranking:

- **Spearheaded Product Category feature development**, driving a site-wide **0.87% lift** in Multi-Offer Add-To-Cart (ATC) rates, generating an estimated **$58M in incremental annual revenue**.
- **Increased ATC conversions by 4%** by architecting a custom **Constrained Neural Network** to enforce price and shipping monotonicity, ensuring high-precision ranking logic.
- **Enhanced multi-offer conversion rates by 3.8%** by modeling multi-dimensional relationships between shipping speed, pricing, and buyer intent to optimize item-page rankings.
- **Designed a Bayesian explore–exploit framework** using **Thompson Sampling** to surface diverse resold (non-new) offer types on items with secondary offers, learning their conversion appeal under sparse feedback.

Technologies: Java (Runtime & Unit Testing), Python (PyTorch, Keras, Pandas, XGBoost), Google Cloud (GCP), BigQuery, Azure, Tableau, SQL.

Personal Projects and Experiences

Machine Learning Competitions May 2026 – Present

- **Published** "State-Driven Retrieval and Learned Re-Ranking for Conversational Music Recommendation" for the RecSys Challenge 2026, in *Proc. Workshop on the ACM RecSys Challenge*, pp. 82–86.
- **Competed** in the GLEE Competition (NeurIPS 2026 IAB Workshop), building AI agents for multi-turn bargaining, negotiation, and persuasion games against agents and humans; presenting a poster at the workshop.
- **Competing** in the Steerability Challenge (NeurIPS 2026), steering LLMs toward honesty without losing capability.

ACTUS / FINOS CDM Collaboration Sep. 2025 – Present

- **Leading** integration work extending the FINOS Common Domain Model (CDM) to natively support ACTUS cashflow calculations, bridging the gap between financial contract standards and open-source infrastructure.
- Driving design and implementation in collaboration with ACTUS-affiliated and independent researchers, building a reusable framework for standardized financial instrument modeling.

Smart Semi-Automated Investment & Portfolio Optimization System (On Hold) May 2025 – Present

- **Designed** a semi-automated investment system for portfolio optimization and long-horizon allocation decisions, with human-in-the-loop decision support driven by signals extracted from SEC EDGAR filings.
- **Built** a web data-acquisition pipeline to get SEC EDGAR filings, combining Selenium browser automation with HTTP extraction and BeautifulSoup parsing, plus data-quality validation.
- **Engineered** an Adaptive Kalman Filter-based allocation model, achieving a **4–6% gain** in information coefficient and an **8% reduction** in portfolio volatility across multiple market-regime backtests.

Technologies: Python (numpy, pandas, Selenium, BeautifulSoup, requests, yfinance, financetoolkit, financedatabase), Interactive Brokers (paper-trading account).

Advanced Pokémon Search – Creator & Sole Developer Jun. 2026 – Present

- **Built and shipped** a zero-backend, statically deployed search engine over **1,400+ species** across 30 game contexts, 350 competitive formats, and 27 regional Pokédexes, serving sub-second queries entirely client-side.
- **Designed** a downward-closed set-family algorithm resolving multi-constraint filter satisfiability in real time, replacing an intractable pairwise enumeration over 49K+ ability pairs per game context.
- **Extended** satisfiability to All/Any/None query modes with predictive feedback: each option shows, before it is picked, whether it would empty or conflict with the rest of the query, and the status line names the filters responsible.
- **Engineered** a TypeScript search core and a virtualized JavaScript front end, resynchronized weekly against upstream data with drift detection; guarded by **6,800+ automated tests** in four CI/CD pipelines, hardened by mutation testing.

Technologies: TypeScript, JavaScript, Node.js, esbuild, Mocha, jsdom, Playwright, Stryker, c8, ESLint, GitHub Actions.

Etiqueta – AI Data Labeling Platform, Founder & Sole Developer Mar. 2023 – May 2025

Architected and deployed **Etiqueta**, a first-of-its-kind mobile-native platform for AI-aided data labeling and image segmentation, built for gamified crowdsourcing across iOS, Android, and ARM-based desktop.

- **Curated 100K+ high-fidelity labels** and **13K image segmentations** via gamified workflows; published open-datasets on Kaggle and Hugging Face (1K+ downloads), plus a technical report and codebase on GitHub.
- **Launched on Global App Stores** as the only public, mobile-native data labeling solution, managing the full product lifecycle from UX design to store optimization.
- **Developed** a high-throughput React Native (web + native) interface supporting 30+ concurrent label interactions per screen, tuning DOM rendering and client-side caching to minimize interaction latency.
- **Built** a scalable Python (FastAPI) and Firestore backend exposing RESTful HTTP APIs with session-based OAuth, response caching, and unit testing (pytest) plus CI/CD for stability across iOS, Android, and macOS.

Technologies: Python (FastAPI), React Native, JavaScript, HTTP/REST, Firestore (NoSQL), OAuth, Axios, Pytest.

Awards and Honors

Excellence in Teaching Award at Princeton University 2018
Turkish Presidential Fellowship Award 2009 – 2014
Ranked 78th out of 1.5M+ candidates in the Turkish National University Entrance Exam 2008

Extra Curricular

Languages: Fluent in English, French, Spanish, and Turkish (Native).
Mentorship: Volunteer mentor at Princeton GradFutures program; each year mentoring about 4 students.
Leadership: Regional Princeton Graduate Alumni Leader; organizing networking events for alumni.

Ph.D. research highlights and full publication list available upon request.

Ph.D. Research Highlights

Bounded Gaussian Mean Estimation, 50-year-old open problem

- Used non-linear optimization to prove that the least favorable distribution has finite support.
- My technique based on the oscillation theorem has been extensively used in multiple-access and wiretap channel setups.

Information Secrecy and User Privacy

- Developed a statistical method, called poissonization, to simplify the analysis of weakly dependent random variables.
- My 'poissonization' proof technique has been employed in large deviations and quantum information theory research.

Privacy in Machine Learning

- Used supervised and adversarial machine learning tools to remove sensitive information from data.
- Ensured minimal computational burden on the user to make the solution feasible for all types of ML prediction tasks.

Professional Services

Technical Program Committees:

IEEE 54th Annual Conference on Information Sciences and Systems (CISS 2020), Princeton, NJ, USA, March 18–20, 2020.
IEEE 52nd Annual Conference on Information Sciences and Systems (CISS 2018), Princeton, NJ, USA, March 22–23, 2018.
